Art Unit: 2834

DETAILED ACTION

Claim Rejections - 35 USC § 102

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1,3-5,8-11,20,34-38 & 43-50 are rejected under 35 U.S.C. 102(b) as being anticipated by Dombrovski et al. (US 6313556).

With respect to claims 1,6,8 & 37, Dombrovski teaches a mover including an outer surface (as seen in Fig. 1), said mover having a magnet component (Fig. 1, #72) and a conductor (Fig. 1, #52), said mover defines a first passageway (Fig. 1, #76 & 78) and a second passageway (Fig. 1, #44) including an inlet, the first passageway encircling a portion of the second passageway (as seen in Fig. 1), and a circulation system (Fig. 1, #16 & 20) comprising a fluid source that directs a first fluid to the first passageway and a second fluid to the second passageway, wherein the fluid source controls the temperature and flow of the first fluid so that the temperature of the outer surface is approximately equal to an ambient temperature (the stator cooling means will cool the stator support (Fig. 1, #74) which forms an outer surface of the mover), wherein the second fluid is approximately boiling at the inlet (the cryogenic fluid used in this system would inherently be boiling at least during the initial operation of the device).

With respect to claims 3,4,9 & 34-36, Dombrovski teaches the mover of claims 1 & 37, wherein the second fluid is boiling.

With respect to claims 5,38 & 50, Dombrovski teaches the mover of claims 1,37 & 49, wherein the mover is positioned in a room that is at room temperature, and

Art Unit: 2834

wherein the temperature of the first fluid at the first inlet is approximately equal to the room temperature.

With respect to claims 10 & 11, Dombrovski teaches the mover of claim 1, wherein the circulation system creates a partial vacuum in the second passageway (which it inherently does as the coolant changes temperature).

Claims 20-26 & 43-49 are rejected under 35 U.S.C. 102(b) as being anticipated by Carr, Jr. et al. (US 4126798).

With respect to claims 20,21 & 43, Carr teaches a mover including a magnet component (Fig. 2, #30) and a conductor (Fig. 2, #25), said mover that defines a first passageway (for cooling the stator as seen in Fig. 2) in the mover and a sealed second passageway (located inside of Figs. 2 & 5, #26) in the mover, the second passageway being filled with a second fluid (air, Col. 5, Lines 46-59) that is not actively circulated; and circulating a first fluid from a fluid source through the first passageway.

With respect to claims 22 & 44, Carr teaches the mover of claims 20 & 43 further comprising the step of transferring heat from a conductor array of the conductor component with a heat transfer (Fig. 2, #27) that is in direct thermal communication with the conductor component and transfers heat from the conductor component.

With respect to claims 23 & 45, Carr teaches the mover of claims 22 & 44, wherein the mover includes a third passageway (indicated generally at Fig. 2, #27 & 70) and the heat transferer transfers heat from the conductor components to the third passageway (Col. 2, Lines 2-14).

Art Unit: 2834

With respect to claims 24 & 46, Carr teaches the mover of claims 23 & 45, further comprising a third fluid (helium) circulating through the third passageway.

With respect to claims 25 & 47, Carr teaches the mover of claims 23 & 44, wherein the heat transferer includes a heat pipe (the apparatus of Carr will act as a heat pipe).

With respect to claims 26 & 48, Carr teaches the mover of claims 23 & 44, wherein the heat transferer includes a thermally conductive structure (all matter is thermally conductive).

With respect to claim 49, Carr teaches a method for making a mover combination, the method comprising the steps of: Providing a mover having a magnet component and a conductor component and controlling the temperature of the mover with the method of claim 43.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 15-19,39-42 & 51-55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dombrovski et al. (US 6313556). Dombrovski teaches the mover of claims 11,37 & 43, but it does not specifically teach said mover being used in an isolation system, stage assembly, or an exposure apparatus for producing semiconductor wafers. However, isolation systems, stage assemblies, and exposure apparatuses for producing semiconductor wafers using rotary motors were well known at the time of the invention. It would have been obvious to one of ordinary skill in the art

at the time of the invention to use the mover of Dombrovski in isolation systems, stage assemblies, and exposure apparatuses for producing semiconductor wafers because superconducting motors are more energy efficient than conventional motors.

Claims 28-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Carr, Jr. et al. (US 4126798). Carr teaches the mover of claim 20, but it does not specifically teach said mover being used in an isolation system, stage assembly, or an exposure apparatus for producing semiconductor wafers. However, isolation systems, stage assemblies, and exposure apparatuses for producing semiconductor wafers using rotary motors were well known at the time of the invention. It would have been obvious to one of ordinary skill in the art at the time of the invention to use the mover of Dombrovski in isolation systems, stage assemblies, and exposure apparatuses for producing semiconductor wafers because superconducting motors are more energy efficient than conventional motors.

Claims 27 is rejected under 35 U.S.C. 103(a) as being unpatentable over Carr, Jr. et al. (US 4126798) in view of Dombrovski et al. (US 6313556).

With respect to claim 27, Carr teaches the mover of claim 20, wherein the mover is positioned in a room that has a room temperature, but it does not explicitly teach the temperature of the first fluid in the first passageway. However, Dombrovski teaches that a temperature of a first fluid in a first passageway is approximately equal to the room temperature (Col. 5, Lines 30-49). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the first fluid of Carr in view of the first fluid cooling means as taught by Dombrovski because it provides and equivalent and equally

well-known means for cooling the stator of a dynamoelectric machine (Dombrovski, Col. 5, Lines 30-49).

Allowable Subject Matter

Claims 7,12-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

With respect to claim 7, while prior art does teach some of the material included in the claim, it does not teach the combination comprising both the first and second passageways being included in the conductor component.

With respect to claim 12, while prior art does teach some of the material included in the claim, it does not teach the combination comprising a pair of spaced apart magnet arrays and a conductor component that includes a conductor array positioned between the magnet arrays.

With respect to claim 13, while prior art does teach some of the material included in the claim, it does not teach the combination comprising a linear motor.

With respect to claim 14, while prior art does teach some of the material included in the claim, it does not teach the combination comprising a voice coil motor.

Response to Arguments

Applicant's arguments with respect to claims 7,20-32 & 43-55 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2834

Applicant's arguments filed 4/27/2006 have been fully considered but they are not persuasive.

In response to the applicant's argument that Dombrovski does not teach a the water cooler controlling the temperature and flow of the first fluid so that the temperature of the outer surface of the mover is approximately equal to an ambient temperature, it is noted that Dombrovski teaches that the water is cooled to a temperature that is approximately equal to an ambient temperature, and is then used to cool the stator of the machine (Dombrovski, Col. 5, Lines 30-49). This arrangement would produce a stator that maintains an outer temperature that is approximately equal to an ambient temperature.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 3743867, US 5032748 & US 6825583

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Page 8

Art Unit: 2834

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Erik D. Preston whose telephone number is (571)272-8393. The examiner can normally be reached on Monday through Friday 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Darren Schuberg can be reached on (571)272-2044. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
